

Harnessing the Power of AI & GIS in Construction Industry

PT. Waskita Karya (Persero), Tbk

Outline

Introduction

AI in Construction Industry

Implementation

Impact

Verdict

1

Introduction

Company Introduction

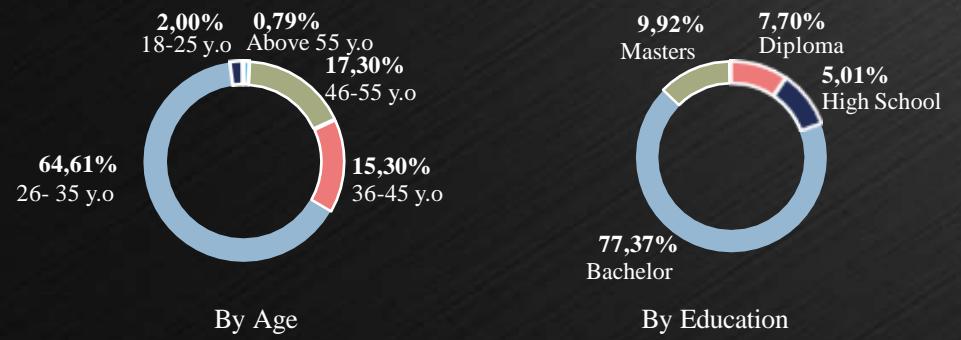

On-Going Projects & Assets

Waskita Karya Business Lines

Contract Value
\$3.8 B

Creative And Talented Young People

2

AI in Construction Industry

Artificial Intelligence in Construction

Improve Productivity

- ✓ Streamline Business Process
- ✓ Accelerate production
- ✓ Reduce operational cost

Ensure Quality

- ✓ Elevate quality of work
- ✓ Deliver Quality Assurance
- ✓ Reach New Level of Standard

Enhanced Safety

- ✓ Early Warning System
- ✓ Risk mitigation
- ✓ Predictive & Preventive Procedure

Achieve Sustainability

- ✓ Reduce Impact on Environment
- ✓ Smart Asset Management
- ✓ Energy Efficiency

3

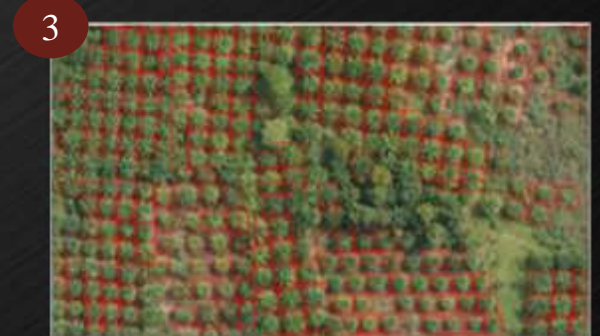

Implementation

AI & GIS Implementation in Construction Project

Trees Counting

Margatiga Dam, East Lampung

- > 3000 ha Catchment / Inundation Area
- 7cm GSD of Raster Imagery
- More than 100.000 palm trees detected
- 6 hours processing time
- 92% precision from model evaluation

AI & GIS Implementation in Construction Project

Pile Counting Cibitung Cilincing Toll Roads, West Java

- Total length = 34 km
- Total length Slab on Pile Structure = 25,4 km
- Total numbers of Spun Pile > 20,000 units

AI & GIS Implementation in Construction Project

Bolt Detection using Drone

PPE Detection using IP Camera

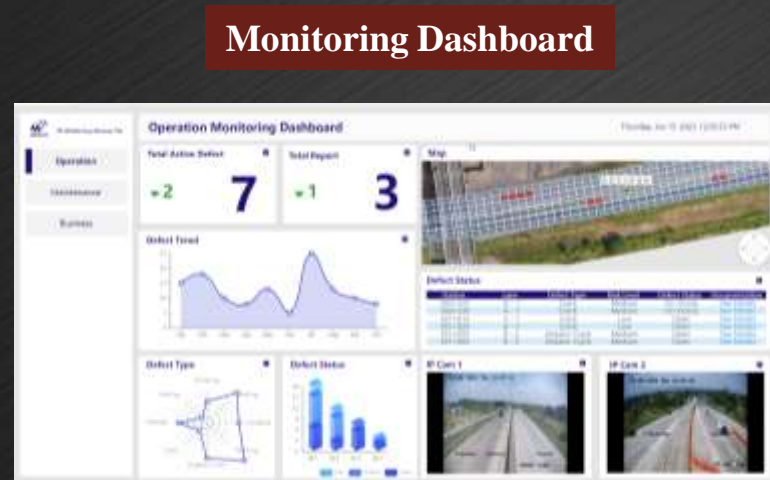

- Drone DJI Matrice M210 + Zenmuse Z30
- 30x Optical zoom

AI & GIS Implementation in Construction Project

Pavement Crack Detection

Kayu Agung – Palembang – Betung Toll Roads, South Sumatra

- Total road length 42 km
- Total Data Acquisition Time = 4 hours
- Vehicle Minimum Speed = 60 km/h
- Total Processing Time = 2 hours
- Total Dataset > 20,000 image

4

Impact

Trees & Pile Counting

Direct Benefits

- Accelerate land acquisition progress
- Lessen the risk of revenue loss due to accuracy

Indirect Benefits

- Reduce risk of safety & security issues
- Evade Social – Economic friction

Impact

▼
89%
Time Efficiency

▼
90%
Cost Efficiency

AI Drone Inspection

Direct Benefits

- Elevate Quality Check to the next level
- Reduce maintenance time and cost
- Provide adequate proof of work to the stake-holders

Indirect Benefits

- Reduce risk of safety & security issues
- Increase stake-holders level of trust

Impact

▼
83%
Time Efficiency

▼
68%
Cost Efficiency

AI Safety Inspection

Direct Benefits

- Improving **safety & compliance** (PPE Compliance Check, APK, Defect)
- Convenience** of remote performance **monitoring**

Indirect Benefits

- Ensure** on schedule **production & delivery**
- Increase stake-holders level of trust

Impact

▼
24%
Time Efficiency

▼
20%
Cost Efficiency

AI Crack Detection

Direct Benefits

- Improving Road inspection without disturbing traffic
- Organized historical database

Indirect Benefits

- Accelerate the road work/ road repair process
- Centralized information dashboard
- Road inspection can be done more frequent

Impact

▼
WIP
Time Efficiency

▼
WIP
Cost Efficiency

5

Verdict

Digital Improvement

- ✓ Internet Of Things (IoT) implementation
- ✓ Improve integration between platform
- ✓ Evaluate impact to business process
- ✓ Scale up implementation for all project

Convince Policy Maker

- ✓ Convince with proof of efficiency by implementing AI in construction
- ✓ Continue to deliver best quality products to stakeholders

Standardization

- ✓ Standardize data quality
- ✓ Create standard procedure for data collection
- ✓ Improve data verification & validation

Improve Knowledge

- ✓ Employee Training Program to elevate knowledge
- ✓ Create Curriculum to standardize knowledge
- ✓ Knowledge management program to preserve knowledge

Thank You All!
